Welcome to the 4th issue of Simon's Workplace Safety Tips.

This issue's topic is ***"How safe is your workplace kitchen?"***

Out of sight = out of mind. Does this sound familiar?

In today's workplaces, we are all guilty of oversights. It's the kitchen, what can go wrong in there?
Yet how many of us actually take a look at how safe our workplace kitchen is?

Is your Kitchen a liability?

When did you last check your kitchen appliances?

This kitchen has 7 electrical appliances plugged in

This kitchen has 5 electrical appliances plugged in

Electrical appliances in a kitchen can:

- ➡ Look safe, however **FAIL** a test using specialised testing equipment
- ➡ Be squashed up against a wall or under a bench
- ➡ Be covered in dust and reduce ventilation
- ➡ Become hot
- ➡ Be pushed to their safety limit without anybody realising until they STOP.

Remember electricity is silent and invisible

How safe is your workplace's kitchen?

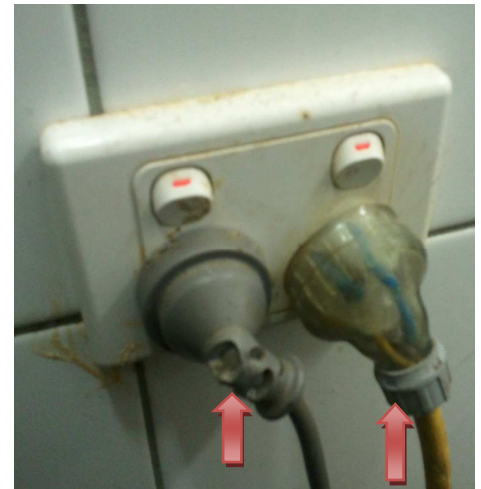

During test & tagging, the following workplace kitchen appliances **FAILED** a safety inspection.

* Damaged Lead (melted)

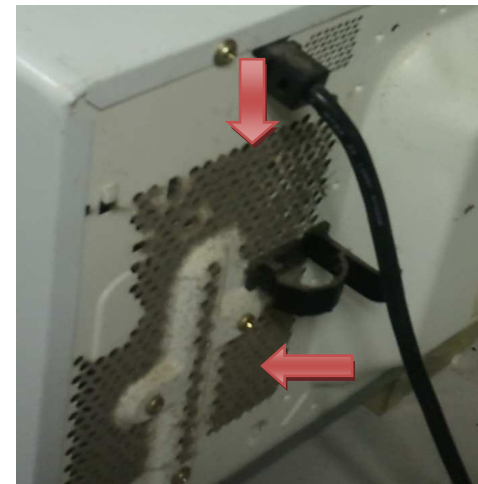

* Damaged Lead (melted)

* Squashed Plugs behind a fridge

* Grill FAILED an earth bond test

* Microwave with clogged vents

* Powerboard FAILED an earth bond test

You only want to toast your lunch, not yourself.

Reduce the risk for personal injury or loss of equipment and data.....
